## NOTES

**Note 1:** For furniture with drawers, pull out all drawers and apply 10# to 20# pressure to top drawer, if unit tips use EQ strap to restrain. On shelves, pull on sides of shelf and if shelves move, use EQ straps or eyelet & wire. For TV's, grab the top of tv, if tippy, use TV straps to restrain.

**Note 2:** Pressure gates **cannot** be used for the top of stairways. Also they must only be placed between framing studs, otherwise, damage to sheetrock or wood panel will occur with use.

**Note 3:** It is generally agreed to keep children completely out of the kitchen. It is a work place for adults, not a play area for toddlers. Most family rooms are attached to the kitchen area and children should be kept there where they can play and still hear.

**Note 4:** Not all safety fences are created equal. We offer only the best quality products. We are an authorized Life Saver® Pool fence distributor and can give you a quote on a fence.

**Note 5:** Safety Surface® is a permanent, rubberized, "poured-in-place," non-skid surface that can be applied at time of pool construction, for a concrete repair situation or anytime for safety sake.

**Note 6:** We advise that the master bedroom be off limits to the baby unless a parent is always there, otherwise baby proofing the room will be necessary.
